

Dr Bev Mackenzie is BIMCO's London-based Representative at the International Maritime Organization and manages BIMCO's relationships across the broader United Nations systems. She is a key link between BIMCO and the global policy making arena, ensuring that BIMCO's technical expertise is utilised by the IMO and other intergovernmental organisations for the benefit of the worldwide shipping industry.

Her degree in chemical oceanography and PhD in physical oceanography from the University of Liverpool, UK mean that she is ideally qualified to help the industry understand the science and engineering which are essential aspects in policy development. She also has extensive expertise in operational oceanography and ocean observation related to maritime industries and the environment more broadly. This includes knowledge on include sea-based sources of marine plastics, climate change, invasive aquatic species and marine pollution.

BIMCO – THE PRACTICAL VOICE OF SHIPPING

Facilitating trade is at the very heart of our business, and since 1905, we've helped our members keep world trade moving. We make it our business to help our members with theirs.

BIMCO members cover 62% of the world's tonnage and consist of local, global, small and large companies. We are an organisation and global shipping community of over 2,000 members in 130 countries.

From our offices in Athens, Houston, Brussels, Copenhagen, London, Shanghai and Singapore we aim to help build a resilient industry in a sustainable future whilst protecting world trade. We do this by finding practical solutions for our members to help them manage risk in a changing world.
